1. Final Release Summary

Included in the final release is a fully functional website, user documentation, developer documentation, demo video and suite of agile documents about our development process. Everything is complete except security and user screening system.

Live application: https://csci423project1.netlify.app/

Repository: https://github.com/423S26/project1

Demo video: https://montana.hosted.panopto.com/Panopto/Pages/Viewer.aspx?id=1ac343d7-5493-4094-ba31-b436010b50a5

2. Product Backlog (Final State)

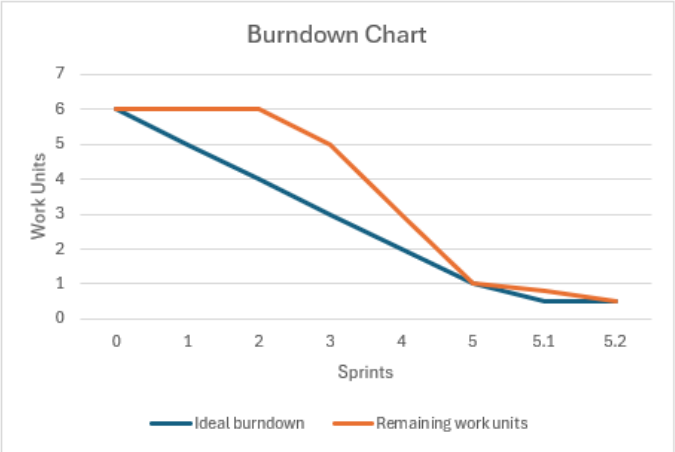
Priority (1-5)	Task	Initial size estimate (1-3)
1	**~~As a user I can post to a community page about events~~**	**~~3~~**
2	~~As a user I need to be able to post things for sale~~	~~3~~
3	~~As a user I can buy things from other users in person and use the app to coordinate times and loca~~	~~3~~
4	~~As a user I need to make an account~~	~~3~~
5	~~As a user I want to find a featured artist~~	~~3~~
6	~~As a contributor I would like to message people individually~~	~~3~~
		18

3. Final Sprint Backlog & Tasks

State the sprint goal and present the sprint backlog for the final sprint. Include task breakdowns with assigned team members and estimated versus actual effort. Make clear which tasks were completed and which were not.

4. Final Burndown Chart

Sprint number	Ideal burndown	Remaining work units
0	6	6
1	5	6
2	4	6
3	3	5
4	2	3
5	1	1
5.1	0.5	0.8
5.2	0.5	0.5
6	0	0



Since our product backlog tasks were large picture goals for our app, the first few sprints we couldn't mark anything as completed because we were working on getting a client, setting the website up and hosting. Once we got past the beginning stage of the website our chart shows a steep decline where we started completing a lot of our product backlog tasks at once.

5. Meeting Notes (Standups)

4/15/26

- Nothing has really happened since last week
- Kaylee work on community post inputs
- Work on important button visibility
- Sylvia work more on styling
- We need to work on the portfolio
- Sylvia add logo
- Work on home page
- Add something about how people get into the featured artists
- Fix search bar again
- Fix product backlog graph
- Demo video
- Slides for demo
- Blocker: search bar keeps breaking randomly

4/17/26

- Nothing has really happened
- Both planning on working on previously discussed stuff

4/20/26

- Kaylee gone so no standup meeting

4/22/26

- Sylvia fixed search bar
- Sylvia fixed styling

- Kaylee added to community post input
- Kaylee is working on portfolio
- Sylvia made power point for presentation
- Sylvia made and added logo
- Sylvia will work on home page
- Kaylee working on admin controls for deleting posts
- Sylvia will make featured artist page

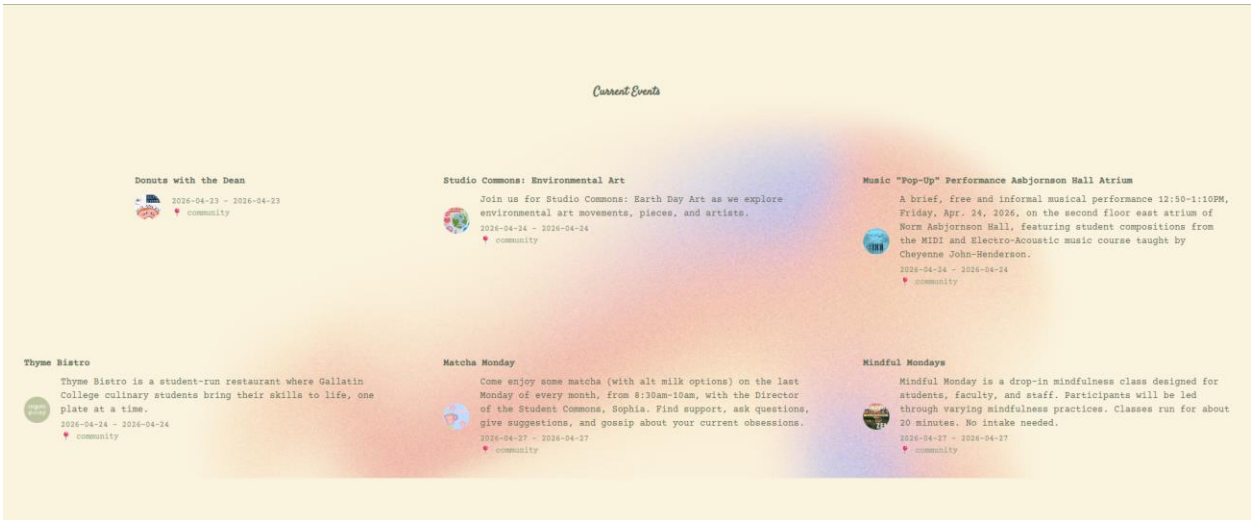
6. Final Release Evidence

Deployed website: https://csci423project1.netlify.app/

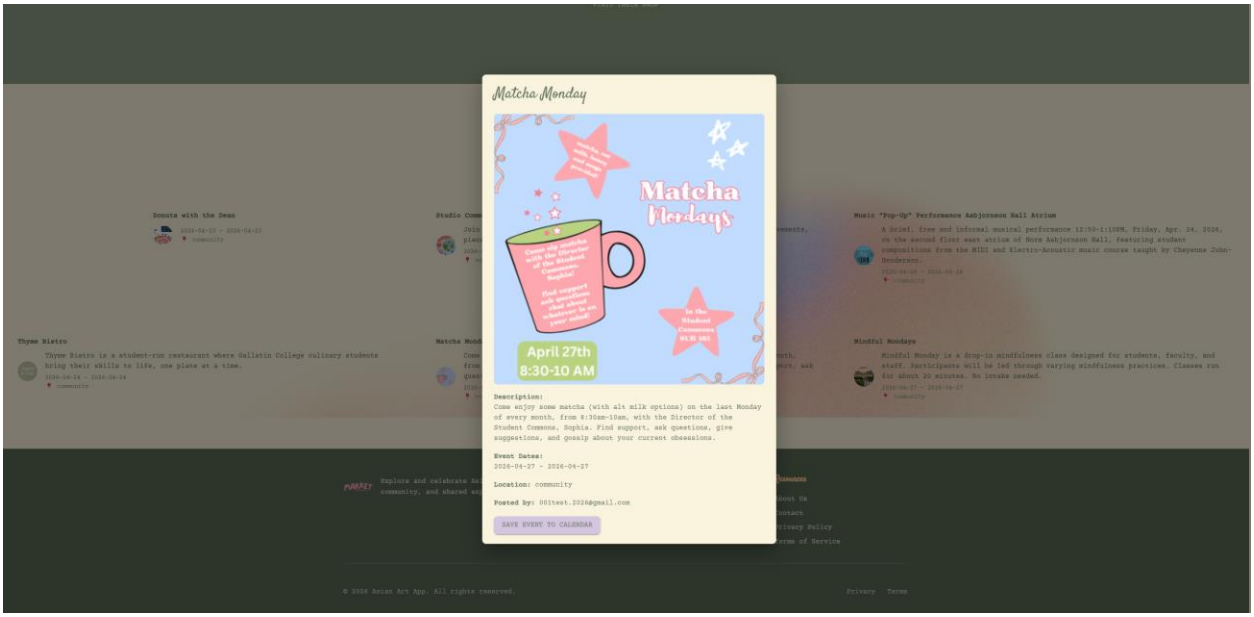
Demo Video: https://montana.hosted.panopto.com/Panopto/Pages/Viewer.aspx?id=1ac343d7-5493-4094-ba31-b436010b50a5

Bugs: No known bugs

Current events on home page show the 6 most recent events from community page

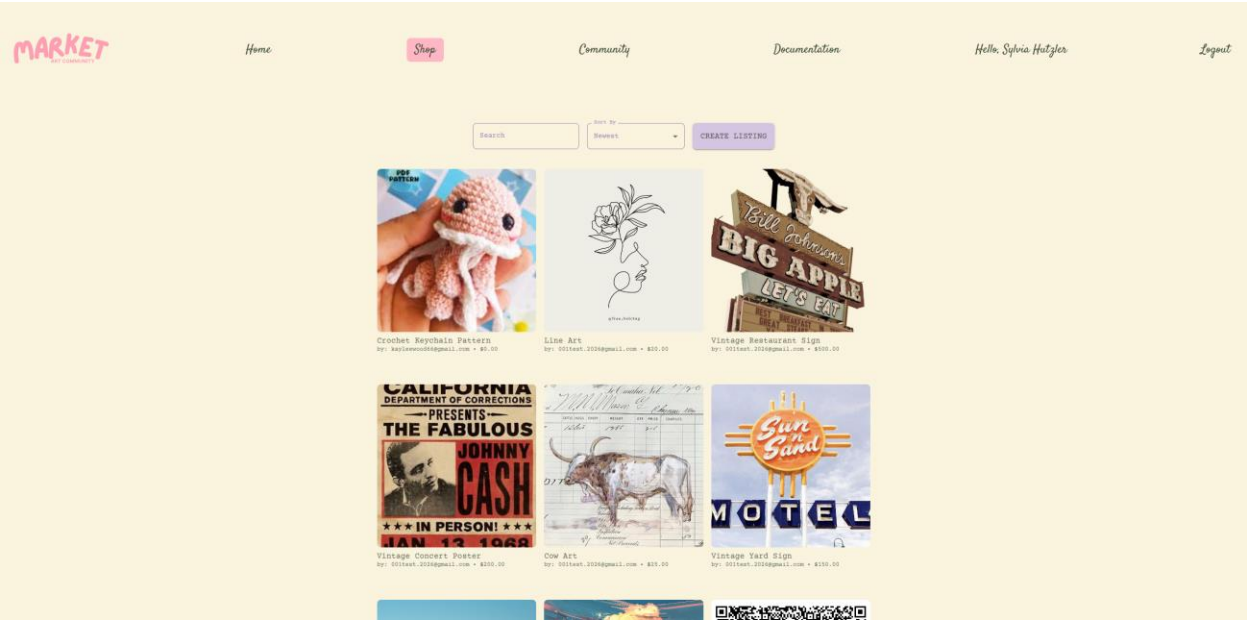


Events can be clicked on to view more information

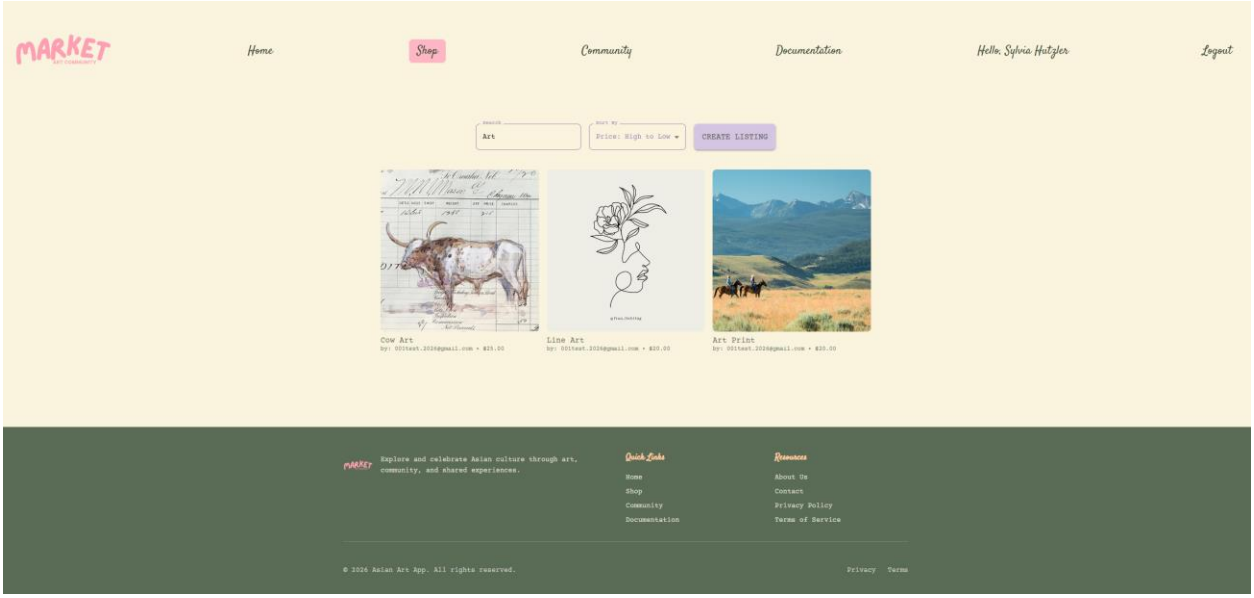


All links on the footer work

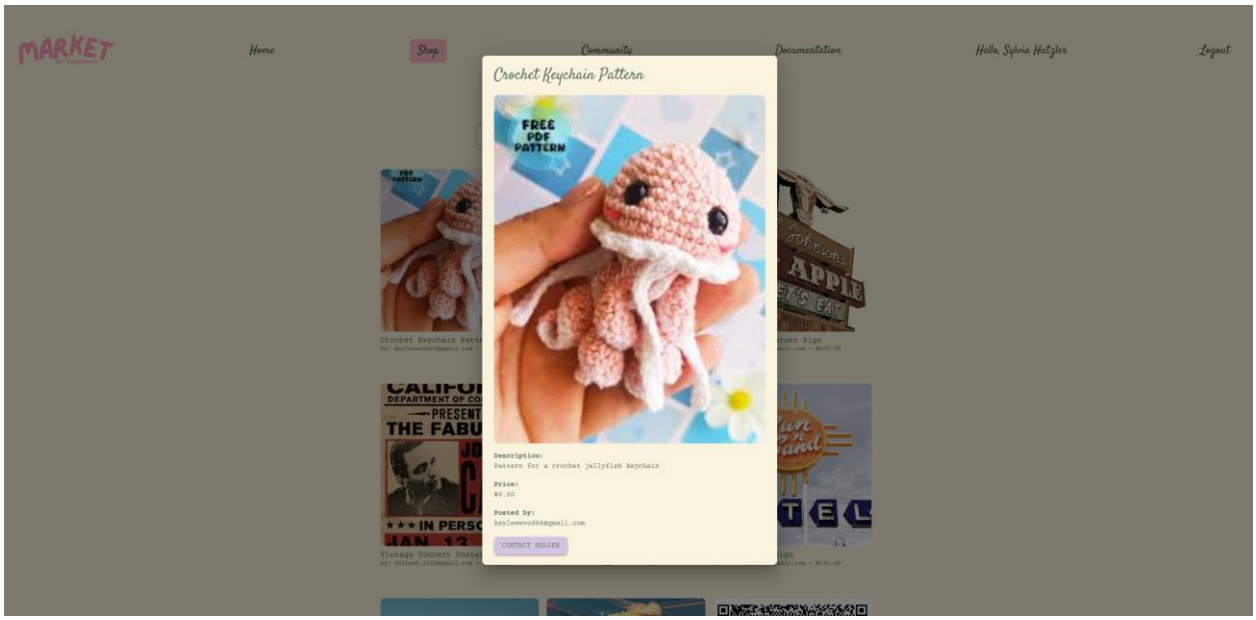
Shop page is completely functional showing all listings from all users. They can be filtered by price and time. The logged in user can only delete their own listings.



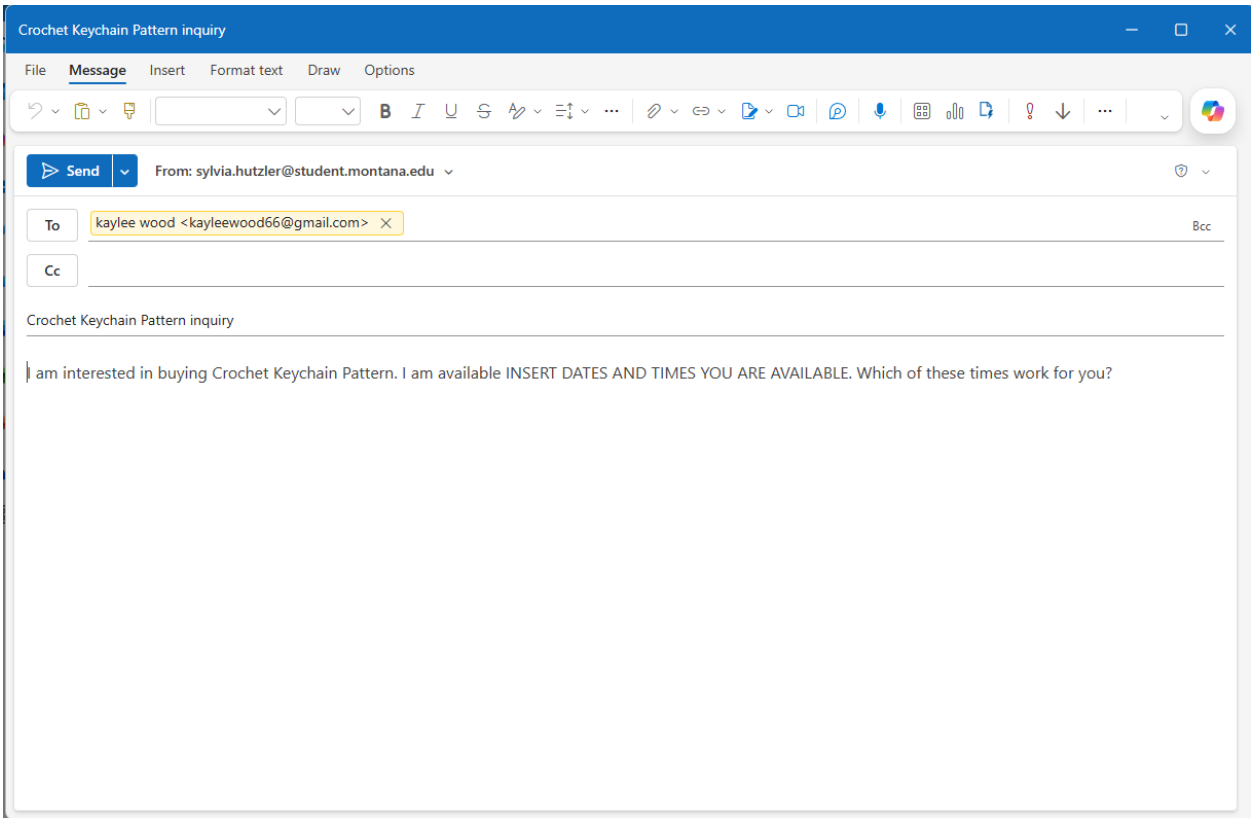
The search bar is also fully functional



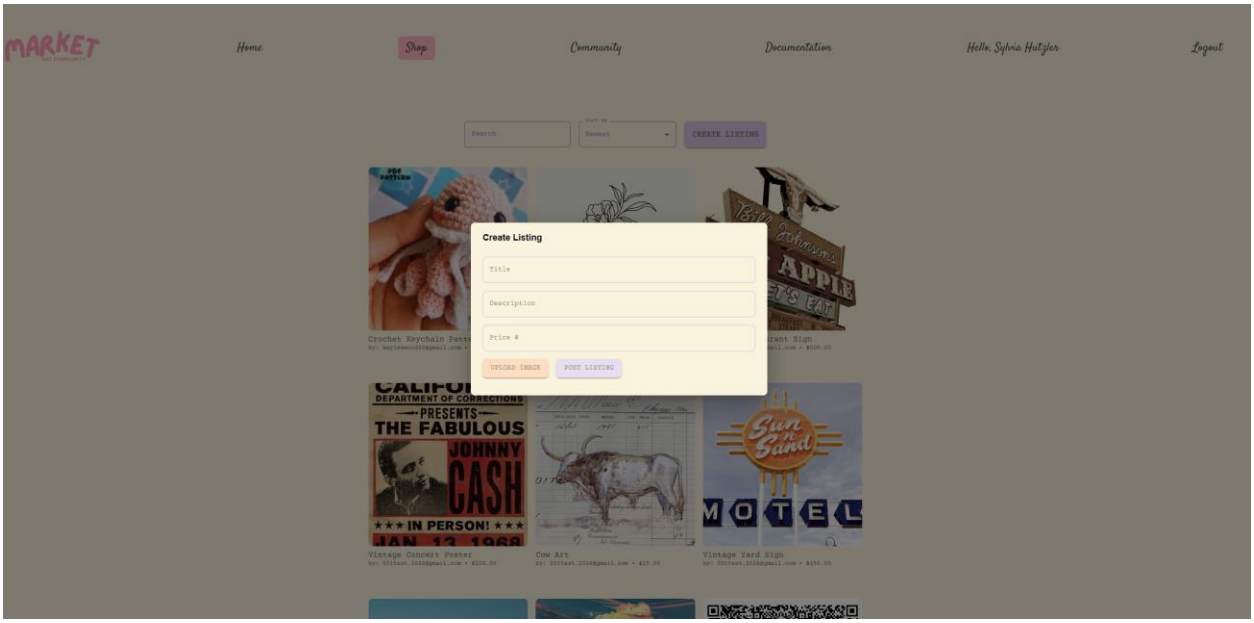
Listings can be clicked on for more information.



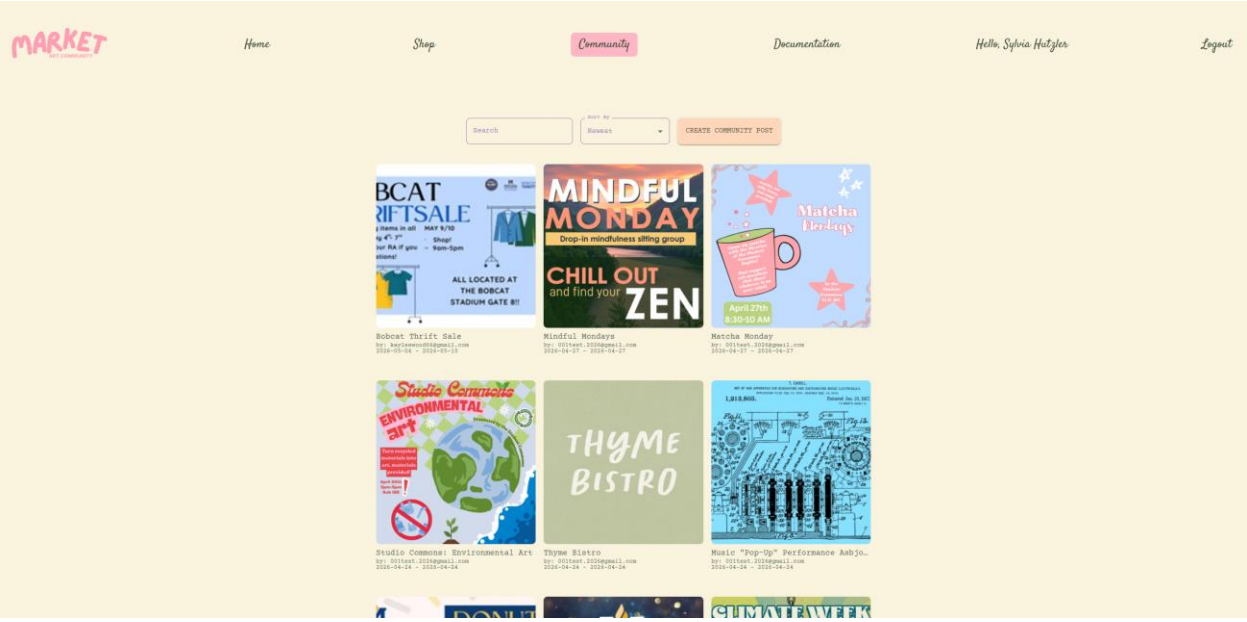
The contact seller button opens an email with a template to encourage clear user communication.



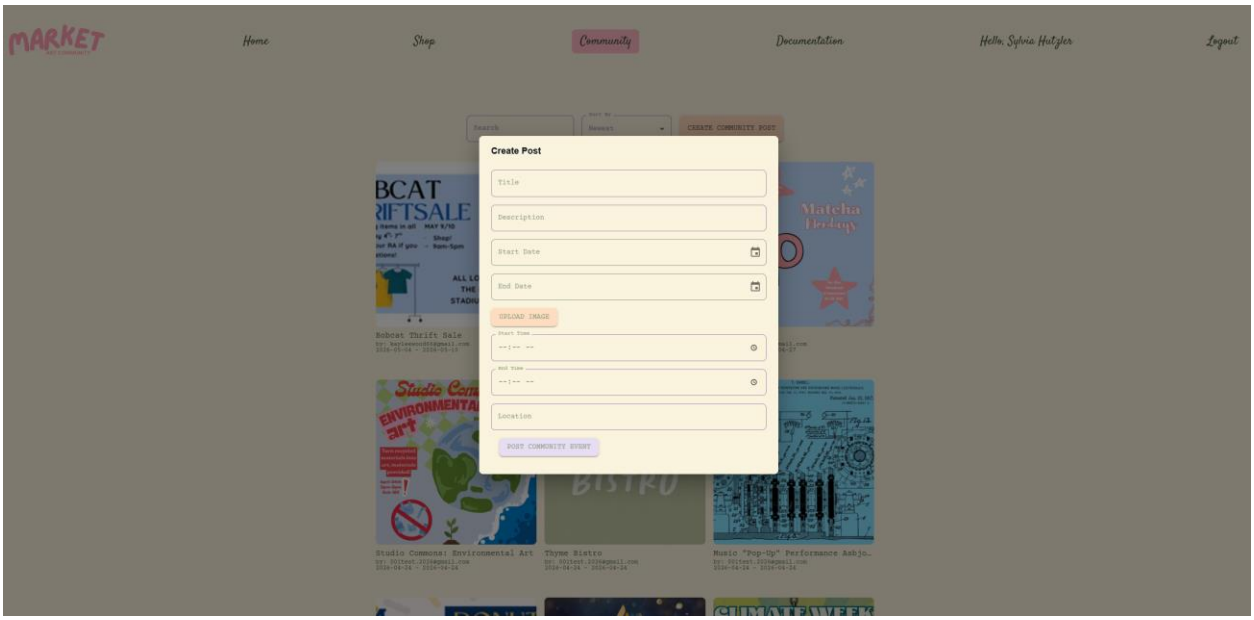
The create listing button opens a create listing popup where the user can input the title, description and price of the item they are selling.



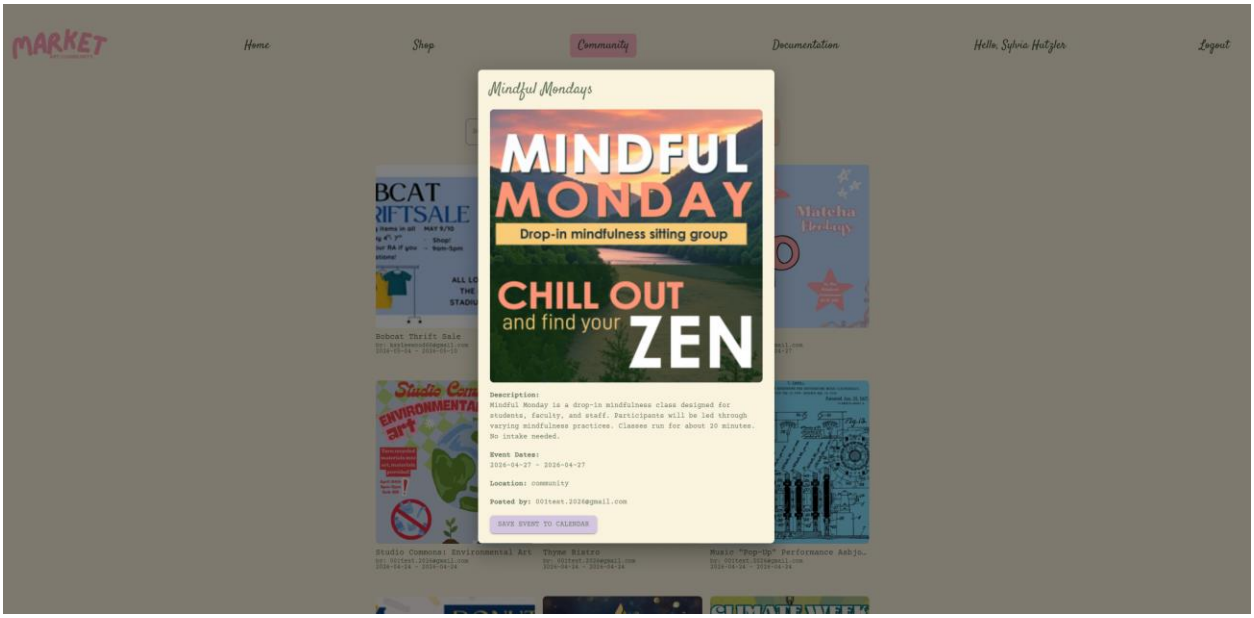
The community page is very similar except the filter does not include price, and it shows the dates of the event.



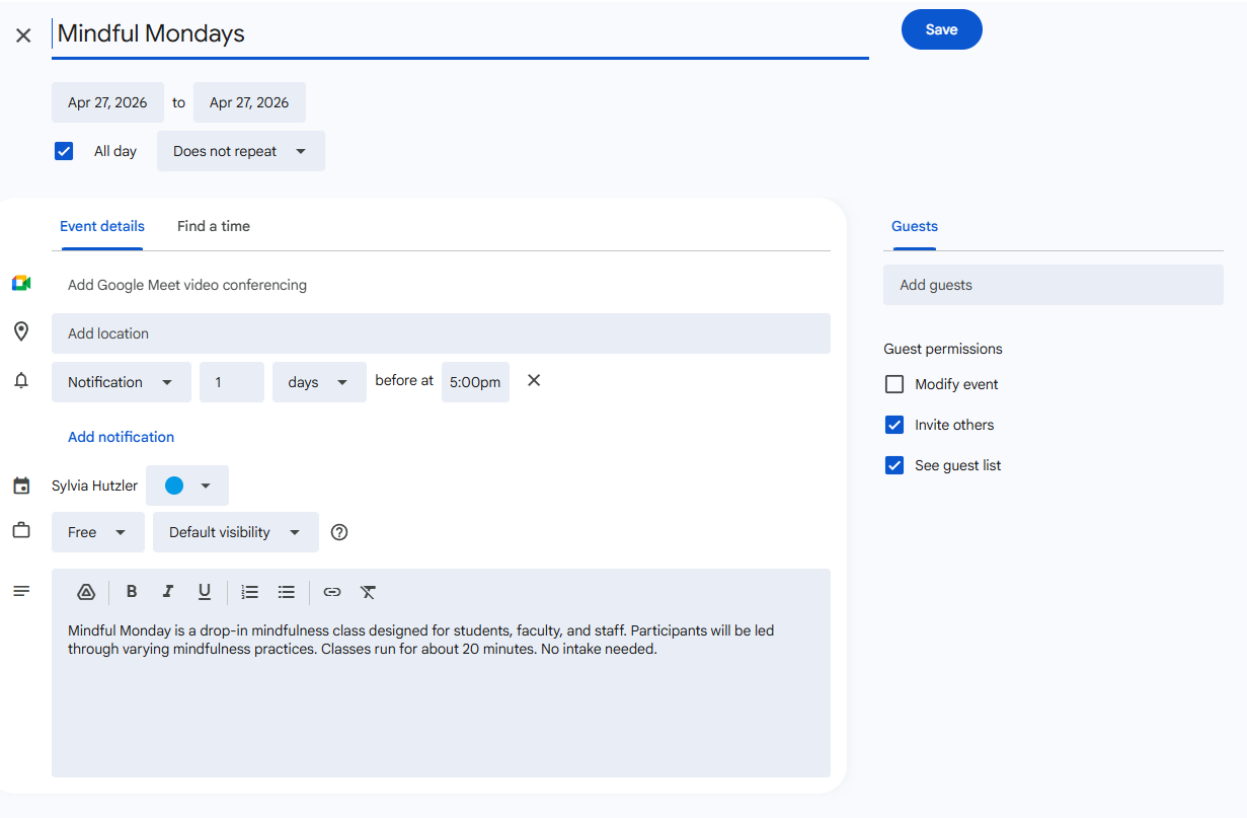
Creation of the event includes time, date and location variables.



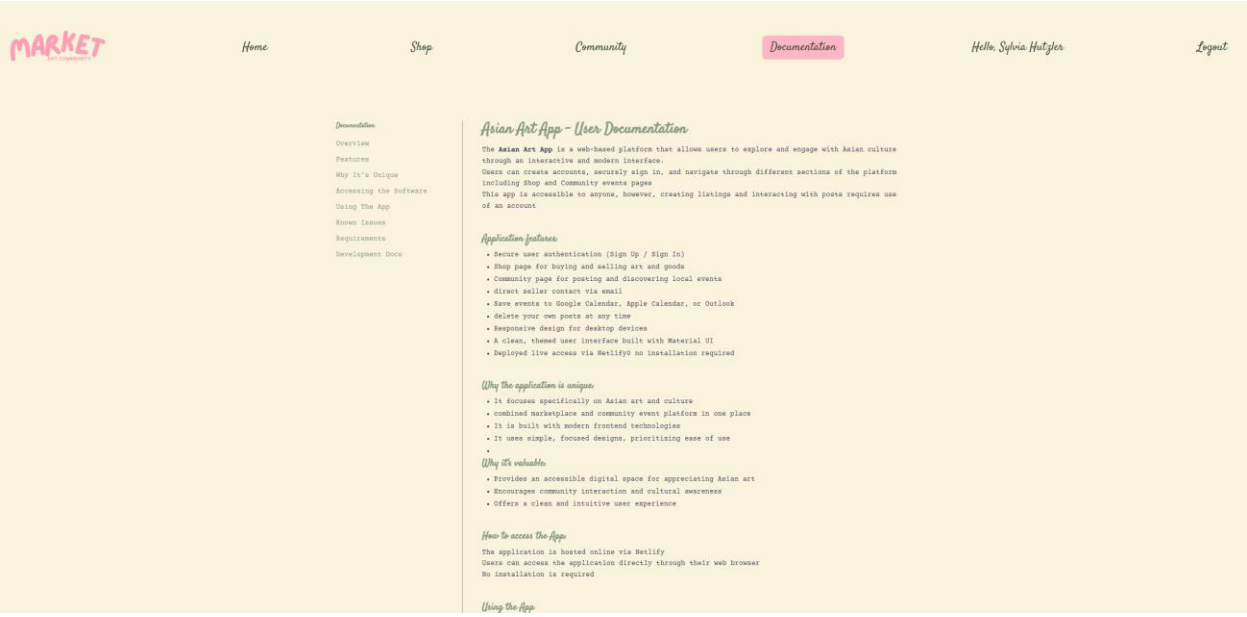
The popup includes the same information



The save event to calendar allows you to save the event as either a file for apple users or a google calendar event



The user documentation is within the app and includes information about the app and how to use it. It also includes a link to the developer documentation in github.



README

Project 1

> A web app for selling items and promoting events locally. This is a multi-page React application

Project Overview

This app allows users to:

- Buy and sell items locally through the **Shop** page
- Create and browse **community event posts**
- Upload images to listings and posts via Cloudinary
- save community events to Google Calendar, Apple Calendar, and Outlook
- Sign up and log in using Firebase Authentication
- Create listings that are stored in a **Firestore database**

  The project was developed as part of ESOF 423 and demonstrates integration of modern web development tools including React, Firebase, Cloudinary, and component-based UI design

Build

The current deployed version of the application can be accessed here:

https://csci423project1.netlify.app/

The build is automatically deployed through Netlify when updates are pushed to the main GitHub branch.

Tech Stack

Users can sign up manually or with google as well as signing in and logging out to existing accounts.
